

PADDY BASMATI

Basmati is world famous for its special fragrance and flavor. In India, it holds a special status in rice cultivation because of its high demand in national & international markets. India accounts for more than 70% of the world's basmati rice production. The major Basmati growing states are Punjab, Haryana, Uttar Pradesh, Himachal Pradesh, Delhi, Uttarakhand, Rajasthan, and Madhya Pradesh. Major export markets include Iran, Saudi Arabia, Iraq, the United Arab Emirates (UAE), Kuwait, Yemen Republic, the United States of America (USA), and the United Kingdom (UK).

Dynamic Crop Calendar (DCC)

It is a real-time tool that tracks and forecasts stresses and their severity by commodity, variety and phenophase wise. The DCC helps to estimate crop health, yield and risk for individual fields at various temporal and geo-spatial levels. DCC also helps in customised monitoring, alert generation and advisory activities.

Yield at Risk (YaR) - Stability

The fluctuation/risk in yield or productivity varies from region to region. The region-wise variation on the yield is depicted in the graph below.

Price Volatility

The monthly fluctuations in price for different benchmark markets are shown below.

Aerial Photo

Aerial photo provides the visual representation of the field periodically.

Multispectral Yield Analysis

Tool that provides a Normalised Differential Vegetation Index (NDVI) analysis of individual fields to ground-truth indices. It is standardised across time periods for quick visual interpretation.

Ground-Truth Risk Report

Real-time estimation of yield and its threshold at various stages of crop growth, based on field monitoring of plant health and detection of stress.

Multispectral Analysis

Normalised Differential Vegetation Index (NDVI) comparison of field versus regional indices across commodity, variety and phenophase.
